SETTING UP ANDROID EMAIL

Open the email app on your phone and select to set up a new account. Enter your email address and the password that you selected for the email account in the Control Panel. Then click Manual setup.

SETTING UP ANDROID EMAIL

For **Protocol**, select IMAP

Email address: Your full email address

Username: Your full email address

Password: The password for the email address above

IMAP server:
imap.gds.us

Security Type: SSL

Server port: 993

Then click Next.

The screenshot shows an Android phone screen with the title "Incoming settings". The status bar at the top shows the time as 11:46, along with icons for signal strength, battery, and HSPA+ connectivity. The settings are as follows:

- Protocol:** A dropdown menu set to "IMAP".
- Email address:** A text field containing "mail@example.com".
- Username:** A text field containing "mail@example.com".
- Password:** A text field with ten dots representing a masked password.
- IMAP server:** A text field containing "imap.one.com".
- Security type:** A dropdown menu set to "SSL".
- Server port:** A text field containing "993".

At the bottom of the screen, there are two buttons: "Back" and "Next".

SETTING UP ANDROID EMAIL

For the outgoing server settings, please enter the following information.

Login required: Should be checked

Username: Your full email address

Password: The password for the email address above

SMTP server: smtp.gds.us

Security Type: SSL
